**A WEBSITE THAT CAN
HELP YOU TO ANSWER
ALL YOUR BEFORE
AND AFTER
DENTURE
QUESTIONS**

DENTURE CARE

Most dentures are made of plastic and plastic needs care when cleaning.

You must not:

- ✗ Use boiling water, only warm always
- ✗ Use anything that will scratch, no steel wool etc
- ✗ Use extreme pressure while holding them
- ✗ Use a tooth brush that is too hard
- ✗ Use chemicals that have not been recommended by a Direct Denture Maker[™]

DENTURE TIPS

There can be metal parts on a denture as well. You have to be careful not to push or bend, also they can be damaged when dropped.

It is wise to only clean them in a sink, not in the shower, accidents happen in the shower.

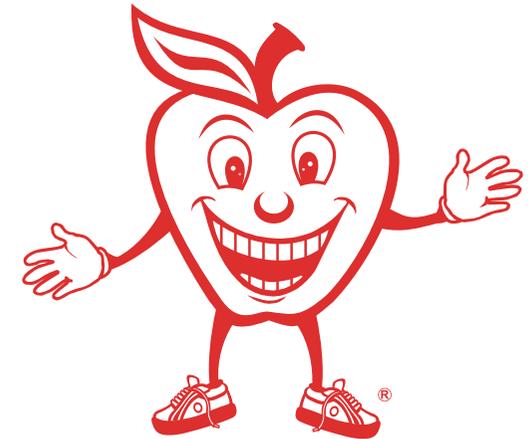

Never leave them where pet dogs could get them. Dogs think that they are bones.

Always use a good strong denture fixative before going for a swim or boating.

When going on holidays, always take your spare set with you and some denture fixative.

And if you need a spare set made, your nearest Direct Denture Maker[™] can help.

**AUSTRALIAN AND INTERNATIONAL
DIRECT DENTURE MAKERS
AND CONSULTANTS**

www.letstalkdentures.com

**A WEBSITE DESIGNED TO CONNECT
YOU, THE DENTURE WEARER,
TO THE EXPERTISE OF
DENTURE MAKERS AROUND
THE WORLD.**

WELCOME TO [WWW.LETSTALKDENTURES.COM](http://www.letstalkdentures.com)

Because the correct fitting, wearing & proper maintenance of dentures can have such a huge impact on your life www.letstalkdentures.com has been created to connect you, the denture wearer, to the expertise of Direct Denture Makers around the world.

It is an Australian and international directory and also a help centre designed to answer your questions about dentures.

You will be connected to Direct Denture Makers who have their own Direct Denture Clinics and are waiting to hear from you.

Q. What is a denture manufacturer called that works and consults directly with clients about their denture needs?

A. In Australia they are called Dental Prosthetists. In USA they are called Denturists. In other parts of the world they are called Clinical Dental Technicians.

Q. Can anyone go directly to these denture professionals?

A. Yes.

Q. Are they licensed and registered under Dental Health Authorities

A. Yes.

Q. Will www.letstalkdentures.com.au be able to help me with pre-denture questions or where do I go to have my dentures made directly, or denture problems that I have now?

A. Yes. The website has a panel of dental prosthetists/denturists. Each one with at least 25 years of denture experience and you can talk directly to them. The website is also a DIRECTORY to help you find your nearest Direct Denture Clinic.

Q. Are there any dentists on this website?

A. No. Only DIRECT DENTURE MAKERS are on this website

INTRODUCTION TO THE PROFESSION

Professional Dental prosthetists specifically trained and educated in the skills and knowledge necessary to provide denture services to the community. Equipped with solid technical, clinical and interpersonal training skills, the Dental prosthetists can design, create, construct, and modify (repair and relines) a prosthesis to ensure optimal fit, maximum comfort, and general well-being.

Let's talk dentures. and
DIRECT DENTURE™

The Dental prosthetists acts as both the clinician and dental technician. She/he is better able to control all aspects of the construction of the prosthesis while enabling a cost saving to the patient.

FUTURE DIRECTIONS COLLABORATION & CO-EXISTENCE

Denturism as a profession has come of age. Offering quality and effective direct patient care, Denturism is an alternative to a very small part of the work of dentists and contributes to the efficiency and effectiveness of good community and dental health care.

With a tradition of first-rate patient care and technical proficiency built upon internationally approved and accepted standards, Dental prosthetists have demonstrated a history of performance and achievement unique among emerging professions.

Together with dentists, these two professions make a significant contribution to the community by reinforcing and supporting each other's roles.

Dentists care for and conserve natural teeth, and prevent and treat diseases of the mouth.

Dental prosthetists, on the other hand, have an explicitly defined role in terms of construction, fitting, patient aftercare and care of dentures.

There are no dentists on the website, only DIRECT DENTURE MAKERS.
